

# Vedant Kakde

+91 9011098067 Portfolio vedantkakde.mail@gmail.com LinkedIn GitHub

## PROFILE SUMMARY

---

QA Engineer with 3+ years of experience in building test automation frameworks and testing distributed, cloud-native systems. Skilled in leveraging Generative AI (RAG, LangChain, prompt engineering) to enhance test generation, validation, and debugging workflows. Strong background in API and UI automation using Playwright (Python), with deep experience in CI/CD pipelines, Kubernetes environments, and non-deterministic system validation. Passionate about integrating AI into the QA lifecycle to drive faster, smarter, and more reliable releases.

## EDUCATION

---

### CDAC

*PG Diploma in Big Data Analytics*

**Bengaluru, India**

*Oct 2022 – Feb 2023*

### Bajaj Institute of Technology

*B.Tech in Electrical Engineering*

**Wardha, India**

*Aug 2019 – Apr 2022*

## TECHNICAL SKILLS

---

**Programming:** Python, Java

**Automation:** Playwright (Python) for UI & API Automation

**Databases:** SQL, MongoDB

**DevOps & CI/CD:** Docker, Kubernetes, AWS, ArgoCD, Git, CI/CD, YAML

**Testing:** API Testing, Web Application Testing, Functional Testing

**Tools:** JIRA

**Operating Systems:** Linux, Windows

**GEN AI Skill:** Prompt engineering, RAG, Langchain

## WORK EXPERIENCE

---

### SDET

**Apr 2025 – Present**

*Amagi Media Labs, Karnataka, India*

- Contributed to a team effort automating 537+ regression test scenarios (34% of a 1,580-case LTS/GA suite) on cp\_test.hub (Gatekeeper) using Behave/Gherkin, helping drive overall automated coverage to 41% across CloudPort's live broadcast platform.
- Executed functional, system, and end-to-end testing across distributed cloud-native environments.
- Validated API responses and system behavior in non-deterministic distributed systems.
- Mentored junior engineers.
- Applied prompt engineering techniques to generate structured test scenarios from user stories

### QA Engineer

**Apr 2023 – Mar 2025**

*Amagi Media Labs, Karnataka, India*

- Automated deployment sanity checks, reducing manual testing effort and improving efficiency.
- Worked with CI/CD pipelines, Docker containers, and cloud infrastructure during EC2-to-Kubernetes migration.
- Performed API and backend testing for cloud-based applications using code-driven approaches.
- Executed web application testing and logged defects using JIRA in Agile environments.

## PROJECTS

---

- **Q&A Support Bot using Retrieval-Augmented Generation (RAG)**
  - Built an LLM-powered Q&A support bot using RAG architecture.
  - Developed and tested RESTful APIs with validation using Postman and curl.
  - Implemented API-level validation strategies ensuring reliable responses.
  - Worked with backend logic and data pipelines simulating real-world API testing scenarios.
  - **Tech Stack:** Python, LangChain, FAISS/Chroma, LLM API
- **DGA Detection Algorithm** — GitHub
  - Developed ML models to detect algorithmically generated domains (DGA).
  - Achieved 96% accuracy using ensemble learning techniques.
